

```
#include <stdio.h>

void main() {
    int x = printf("C is placement oriented Language") - printf("Hi");
    printf("%d %o %x", x, x, x);
}
```

ans "C is placement oriented Language"
which is 31 characters.
"Hi" which is 2 characters.
The value of x is calculated as $31 - 2 = 29$.

29 is the value of x in decimal.
35 is the octal representation of 29.
1d is the hexadecimal representation of 29.

so, output :- 29 35 1d
