```c
#include <stdio.h>

int main() {
    double speed = 4.0; // Speed in km/h
    double time = 0.05; // Time in hours (3 minutes converted to hours)

    // Calculate the distance traveled
    double distance = speed * time;

    // Display the distance
    printf("Distance traveled: %.2f kilometers\n", distance);

    return 0;
}
```
