```c
#include <stdio.h>

int main() {
    float originalPrice, taxRate, finalPrice;

    printf("Enter original price:- ");
    scanf("%f", &originalPrice);

    printf("Enter the tax rate (in the percentage):- ");
    scanf("%f", &taxRate);

    finalPrice = originalPrice + (originalPrice * (taxRate / 100.0));

    printf("The final price after adding %.2f%% tax is: %.2f\n", taxRate,
finalPrice);

    return 0;
}
```
